

TOWN LAKE PARK U-8 FIELDS

INITIAL PAINTING INSTRUCTIONS

1) Locate the pins using the metal detector.

Pull the tape measure from the corner closest to the utility along the sideline to the opposite corner. Locate all the pins along the sideline using the metal detector. Mark the pins for the field in white. Repeat this on each touch line and sideline. Pull the tape measure from one touch line to the other to locate the pins within the field. This will need to be completed for each of the two fields being painted. Once all the pins are located, use the string and screwdrivers to layout the fields.

2) Paint the field

For the fields, begin with the exterior. Place screwdrivers on each corner and at the midfield pin pulling the line tight between each point. Once the exterior of the field has the string pulled, pull it back to the beginning of the keeper box on the touch line. Move around the keeper box to the other touch line. Once you complete the keeper box, pull the line to the screwdriver located at one of the midfield pins. Cross the field to the other sideline midfield pin. Pull to the keeper box on the touchline of the other end of the field. Complete the keeper box. Once the lines are pulled, you can now paint the field with white paint. To use the paint machine, shake the paint can well until the ball inside freely moved. Place the paint can in the paint machine by sliding it into position with the spray nozzle pointed from side to side (not front to back). Squeeze the handle on the paint machine to spray the paint. There should be a 4-5" thick line. If there is a thin line, adjust the can by turning it 90° and try again. After painting the lines, roll the string back up in the opposite direction to avoid tangling the line. Arcs and circles will be discussed later.

3) Arcs and circles

Using the tape measure and a screwdriver, paint the arcs and circles by locating the center pin and pulling the tape measure from line to line or in a circle with the paint can at the distance required.
